

Qivalon Dieselinsektor

Stop diesel theft and fuel fraud

Monitor refuelling digitally

Diesel theft is an ongoing issue in the logistics and transportation industry. Nevertheless, the majority of such cases remain undetected despite regular and often time-consuming analyses. In the end, companies affected quickly suffer a high financial loss.

The solution

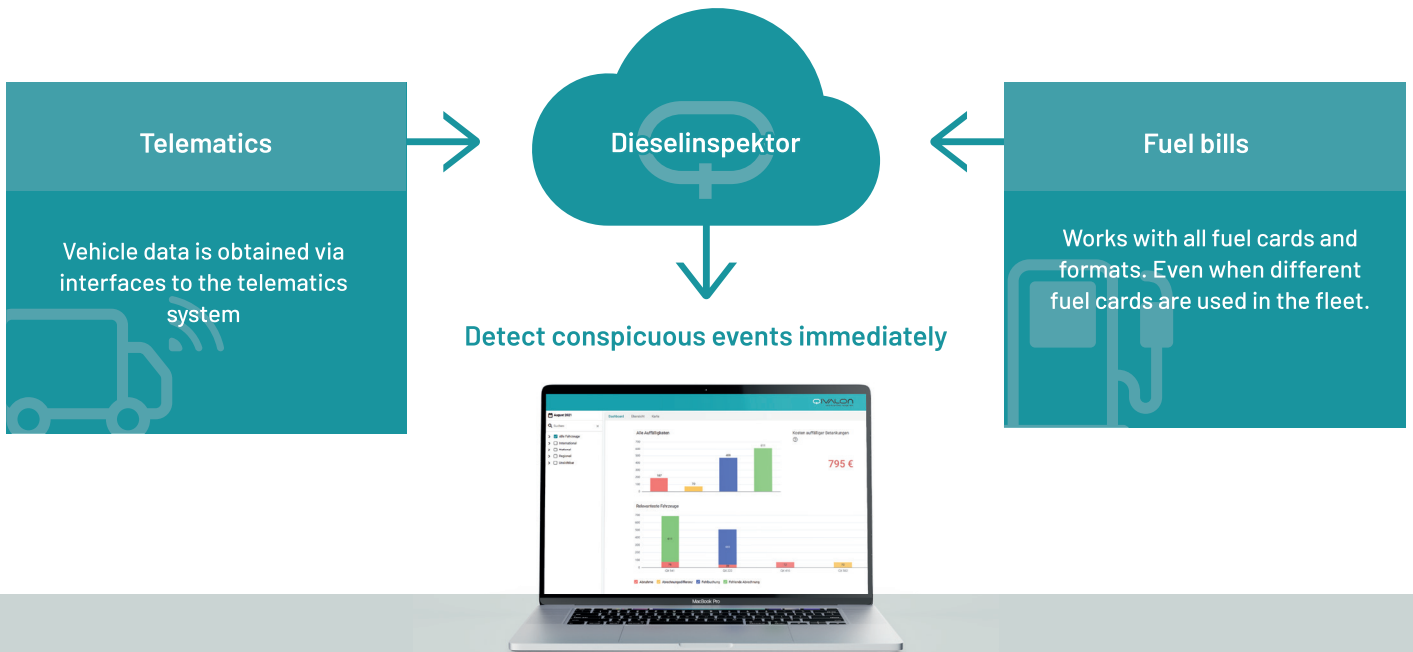

The Dieselinsektor automatically compares telematics and fuel billing data to efficiently detect fuel fraud.

- ☑ Automated detection of theft out of the tank and at the fuel station
- ☑ Efficient controlling of fuel bills for your entire fleet
- ☑ Minimization of theft thanks to preventive effect of the Dieselinsektor
- ☑ Sleep more peacefully, as the Dieselinsektor has everything in view

Easy integration

Dieselinsektor works without additional hardware and only uses existing data. Only a telematics system with FMS connection is required, whose data is then analysed by the Dieselinsektor using specially developed algorithms.

For Dieselinsektor customers, a significant reduction in shortfalls is often visible after just a few months. What savings are possible for you? Find out by testing the Dieselinsektor one month for free.

About Qivalon

Qivalon is specialised in independent data analysis and cloud-based software solutions in the field of transportation and logistics. As a technology-oriented university spin-off, Qivalon has more than 10 years of experience in intelligently linking of telematics data with other data sources. We are your competent partner for the digital transformation in logistics.
